## Preface

Fast progress in the field of Information and Communication Technologies enforces fast changes in business informatics applied in any organization. We have the pleasure to present our new issue of *Business Informatics* containing the newest research results in the field of broadly understood Business Intelligence. It consists of six papers devoted to selected aspects of Business Intelligence. The first paper is devoted to IT tools used in visualization of business processes. The second one underlines the role and importance of aspect-oriented programming within the SOA architecture. The next article characterizes the role of internet in open innovations models development. Then we can read the paper devoted to selected concepts of process knowledge and review selected issues of process knowledge sharing by extension of modeling languages. The next article gives the reader the characteristics of collaboration between the scrum and third party services in the network organizations. This volume of the *Business Informatics* ends with the article presenting the concept of Real-time Business Intelligence with brief review of practical applications.

Editors of this volume would like to thank the reviewers for insightful and critical remarks on all articles. These reviews have been very valuable for the authors when preparing the final versions of papers.
