## **Preface**

The subject of development and implementation of ICT is a source of many scientific considerations. At the same time, investing in modern ICT solutions is one of the connections of organizational improvement directions. Therefore, the subject of management systems is still a current and important topic of publication. The editors would like to thank the authors for their articles, thanks to which the magazine is still developing and thriving.

An extremely valuable feature of the Business Informatics series is the fact that the studies contained in it are the presentations of various opinions on the application of modern ICT solutions. These perspectives and views often allow readers to broaden their own reflections related to the created opinion on the possibilities and directions of application of information and communication technologies in economic practice.

It is also important to notice that not all texts sent for publication meet formal and substantive requirements. It increases the significance and value of publications which have received double positive reviews and which have been selected for publication in this issue of Business Informatics. Currently, as a result of a multistage and strict formal and substantive verification of our journal, only approximately 25% of the submitted texts are accepted for publication.

The editor of this issue would like to express her gratitude to all the authors who wanted to share their experiences and opinions. In addition, she would like to thank the reviewers for their insightful and factual assessments of the submitted works.

*Iwona Chomiak-Orsa*
